

PROJECT DOC

Server Requirement

Building Technology

- **Backend Framework:** Laravel 9x
- **Frontend Framework:** 4x

System Requirements

- **Requires PHP Version:** 8.1
- **Required MySQL Version:** 5.7
- **Database Support** MySQL, Mysqli.

PHP Extension Requirement

- **BCMath PHP Extension**
- **Ctype PHP Extension**
- **Fileinfo PHP Extension**
- **Mbstring PHP Extension**
- **OpenSSL PHP Extension**
- **PDO PHP Extension**
- **Tokenizer PHP Extension**
- **XML PHP Extension**

Installation Process

Required PHP v8.1

Minimum MySQL version: 5.7

Step : 01

Download file from codecanyon and extract in your pc and you will get 03 folder. Listed below

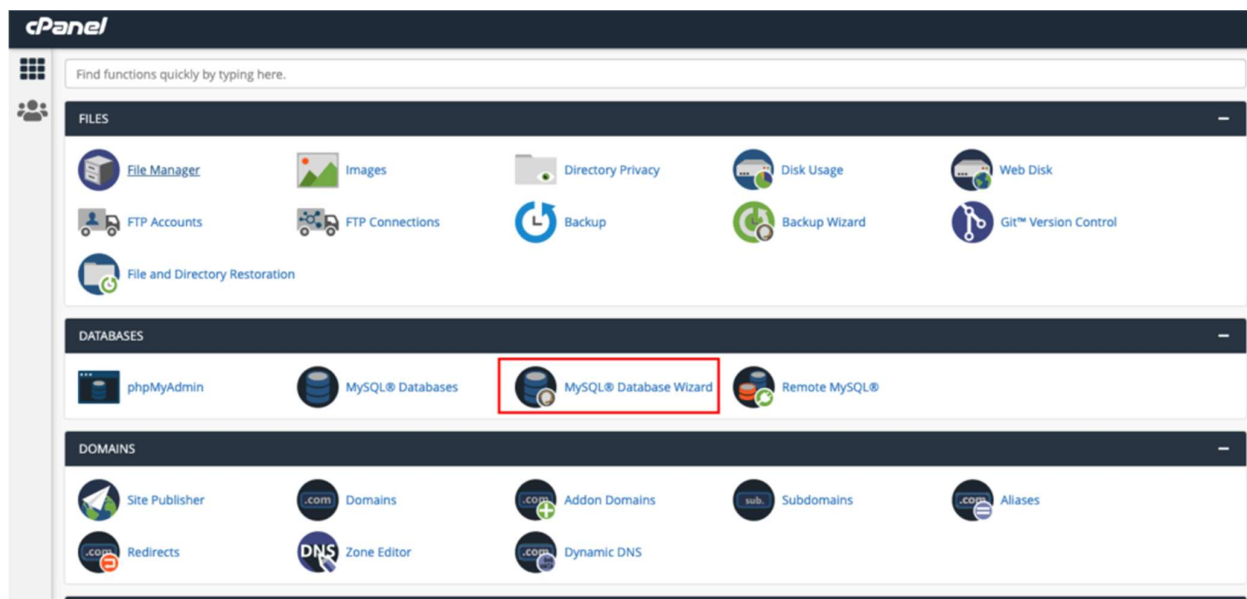

- Documentation
- Installable File

Now Open installable folder, you will get a zip file. you have to upload it to your server using ftp or file manager.

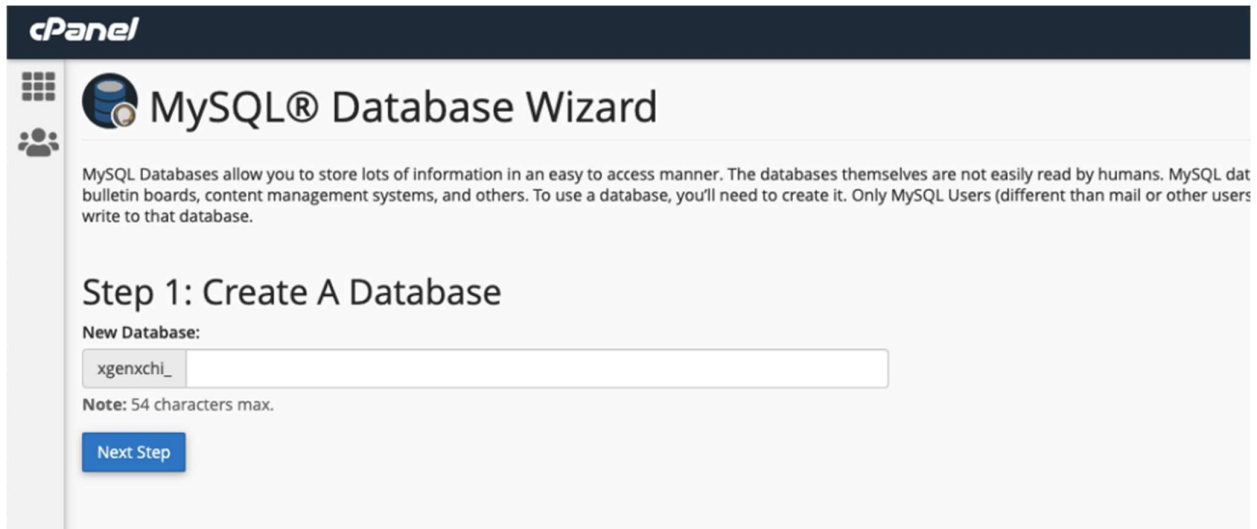

Step : 02

01. Now login to you cpanel and go to > MySQL® Database Wizard

cpanel interface

02. create database

The screenshot shows the cPanel MySQL Database Wizard interface. At the top, the cPanel logo is on the left, and the title "MySQL® Database Wizard" is in the center. Below the title, a paragraph explains that MySQL databases allow storing information in an easy-to-access manner and that they are not easily read by humans. The main heading is "Step 1: Create A Database". Underneath, it says "New Database:" followed by a text input field containing "xgenxchi_". A note below the field states "Note: 54 characters max." At the bottom of the form is a blue button labeled "Next Step".

Step 1: Create A Database

New Database:

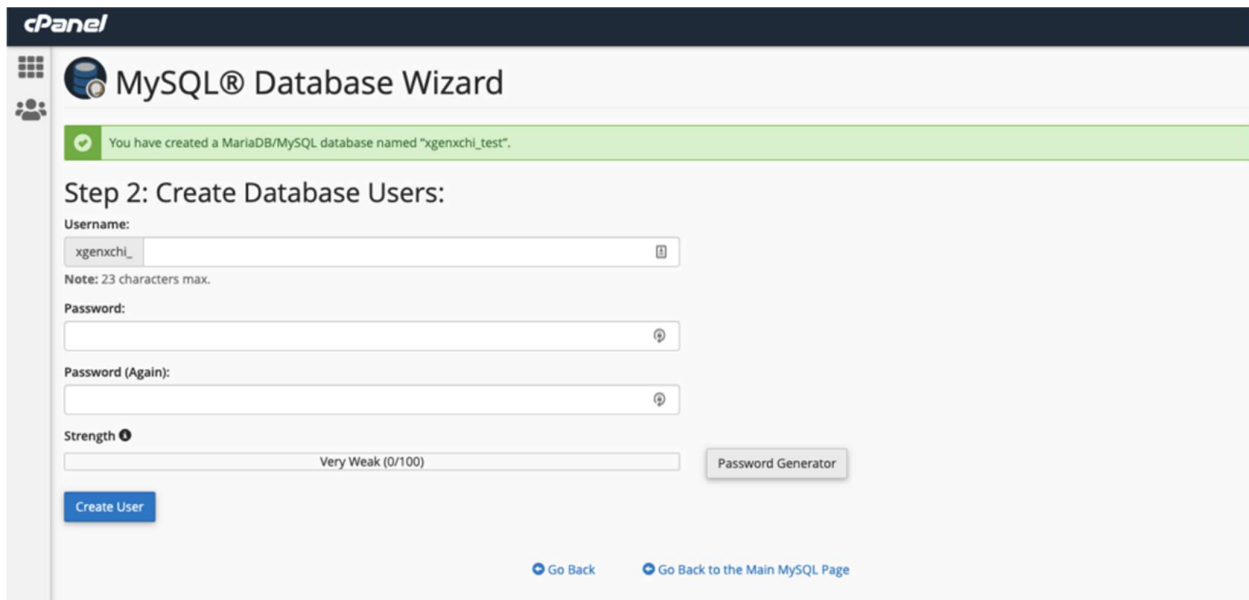

xgenxchi_

Note: 54 characters max.

Next Step

create a database, using mysql data wizard

03. Create Database Users, do not forget to keep you database user password, we will need this while we run installation wizard.

The screenshot shows the cPanel MySQL Database Wizard interface for Step 2. At the top, the cPanel logo is on the left, and the title "MySQL® Database Wizard" is in the center. A green success message bar at the top states "You have created a MariaDB/MySQL database named 'xgenxchi_test'". The main heading is "Step 2: Create Database Users:". Below this, there are three input fields: "Username:" with "xgenxchi_" entered, "Password:" (empty), and "Password (Again):" (empty). A note below the username field states "Note: 23 characters max.". Below the password fields is a "Strength" indicator showing "Very Weak (0/100)". To the right of the strength indicator is a "Password Generator" button. At the bottom left is a blue button labeled "Create User". At the bottom right are two links: "Go Back" and "Go Back to the Main MySQL Page".

Step 2: Create Database Users:

Username:

xgenxchi_

Note: 23 characters max.

Password:

Password (Again):

Strength: Very Weak (0/100)

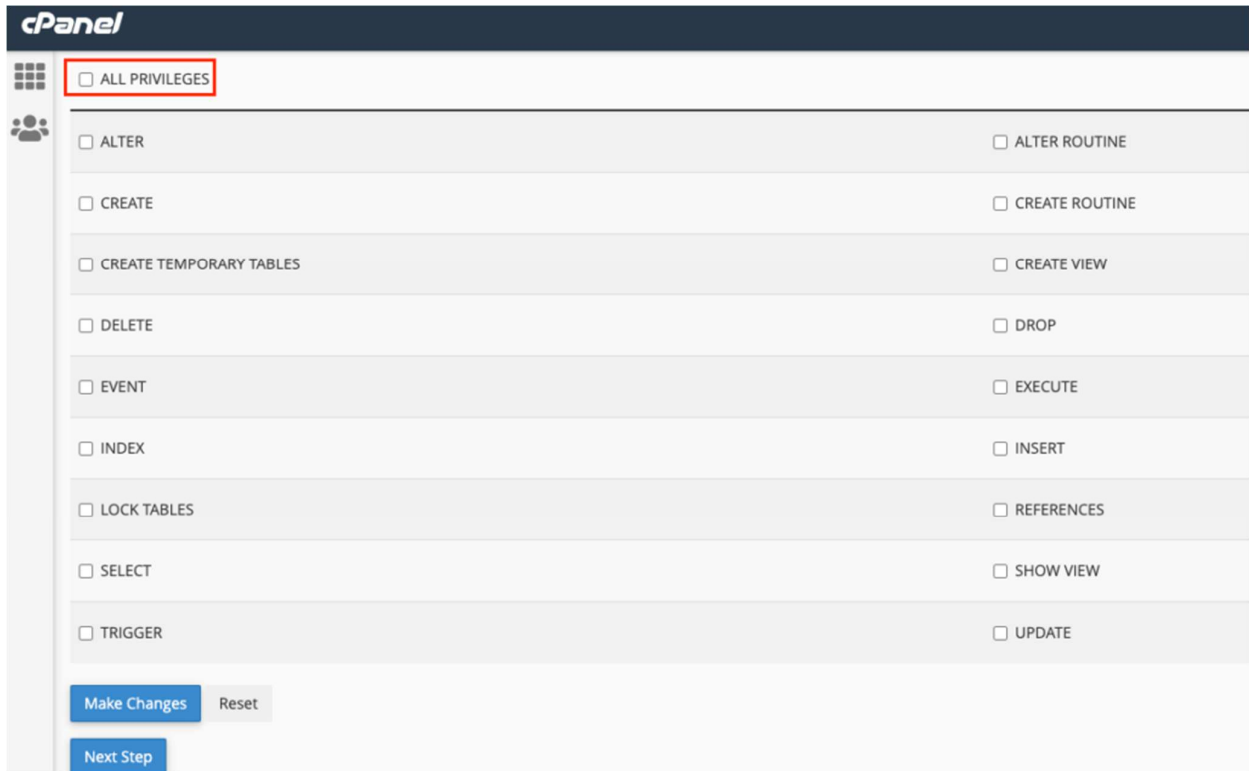

Password Generator

Create User

[Go Back](#) [Go Back to the Main MySQL Page](#)

create database user, using mysql database wizard

04: Add user to the database. check all privileges and click make changes. then click "Next Step"

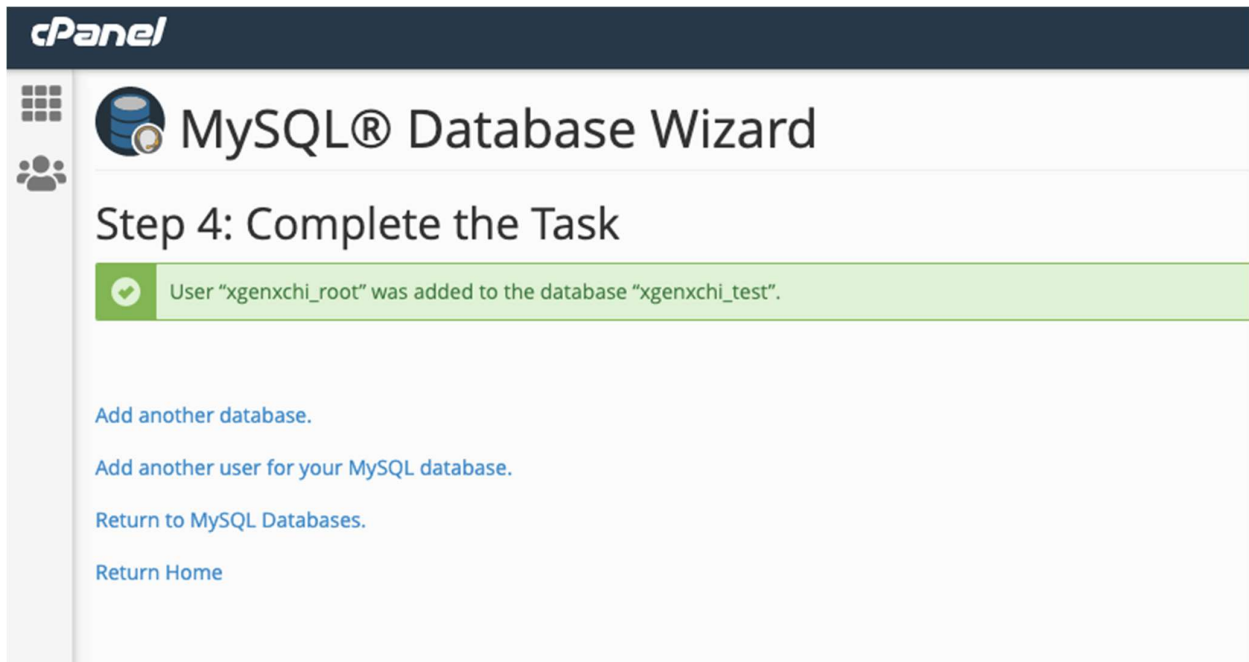

The screenshot shows the cPanel MySQL Privileges configuration page. At the top, the 'cPanel' logo is on the left, and a red box highlights the 'ALL PRIVILEGES' checkbox. Below this, a grid of checkboxes lists various database privileges. At the bottom, there are three buttons: 'Make Changes' (blue), 'Reset' (grey), and 'Next Step' (blue).

MySQL Privileges	
☐ ALL PRIVILEGES	
☐ ALTER	☐ ALTER ROUTINE
☐ CREATE	☐ CREATE ROUTINE
☐ CREATE TEMPORARY TABLES	☐ CREATE VIEW
☐ DELETE	☐ DROP
☐ EVENT	☐ EXECUTE
☐ INDEX	☐ INSERT
☐ LOCK TABLES	☐ REFERENCES
☐ SELECT	☐ SHOW VIEW
☐ TRIGGER	☐ UPDATE

Make Changes Reset

Next Step

database create is done, keep database user, database name, database password in a note.

The screenshot shows the cPanel MySQL Database Wizard at Step 4: Complete the Task. The cPanel logo is at the top left. Below it is a MySQL icon and the title 'MySQL® Database Wizard'. The step title 'Step 4: Complete the Task' is prominently displayed. A green success message states: 'User "xgenxchi_root" was added to the database "xgenxchi_test".' Below this, there are four blue links: 'Add another database.', 'Add another user for your MySQL database.', 'Return to MySQL Databases.', and 'Return Home'.

MySQL® Database Wizard

Step 4: Complete the Task

✔ User "xgenxchi_root" was added to the database "xgenxchi_test".

[Add another database.](#)

[Add another user for your MySQL database.](#)

[Return to MySQL Databases.](#)

[Return Home](#)

05. Upload installable file to server

Select the file you want to upload to "/home/devrobin/public_html/clients/tutorial".

Maximum file size allowed for upload: ∞

☐ Overwrite existing files

Drop files here to start uploading

or

Select File

nexelit-v2.3.zip

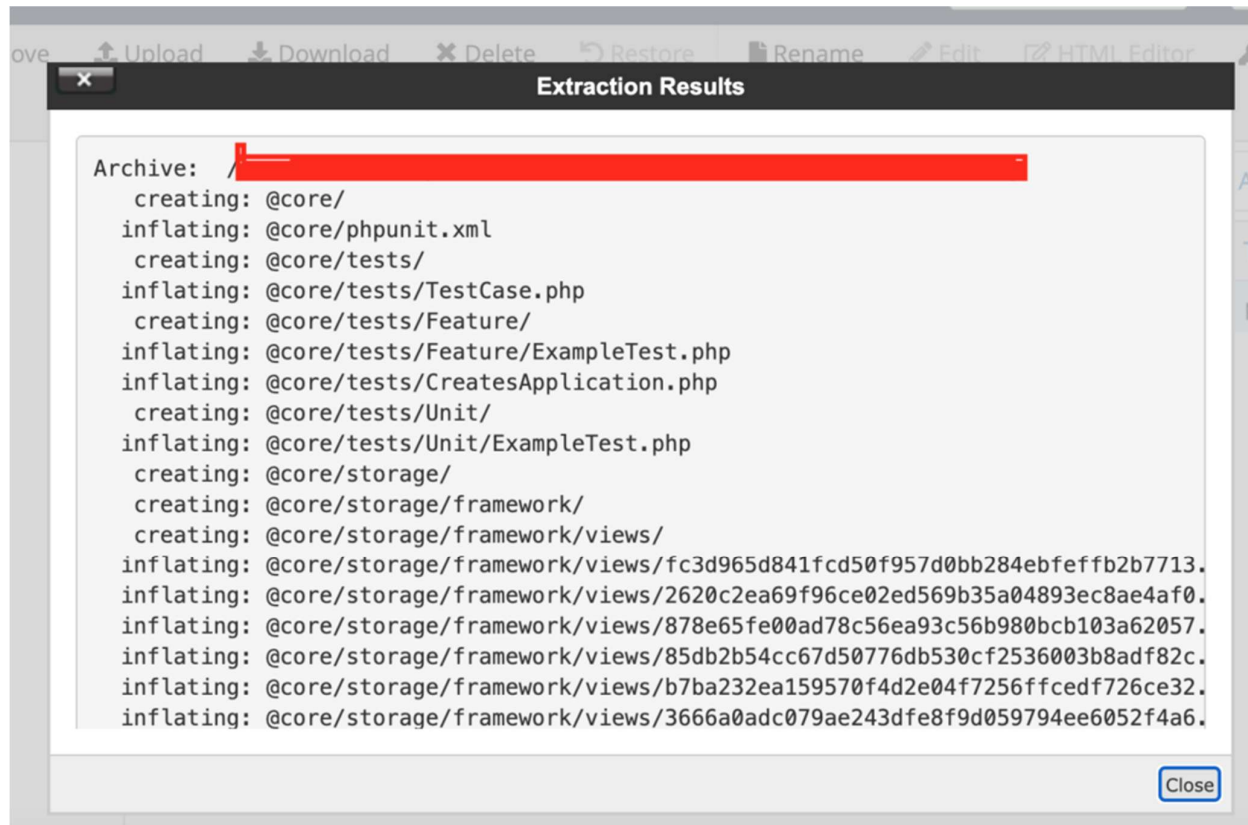

30%

33.25 MB / 109.23 MB (30%) complete

[Go Back to "/home/devrobin/public_html/clients/tutorial"](#)

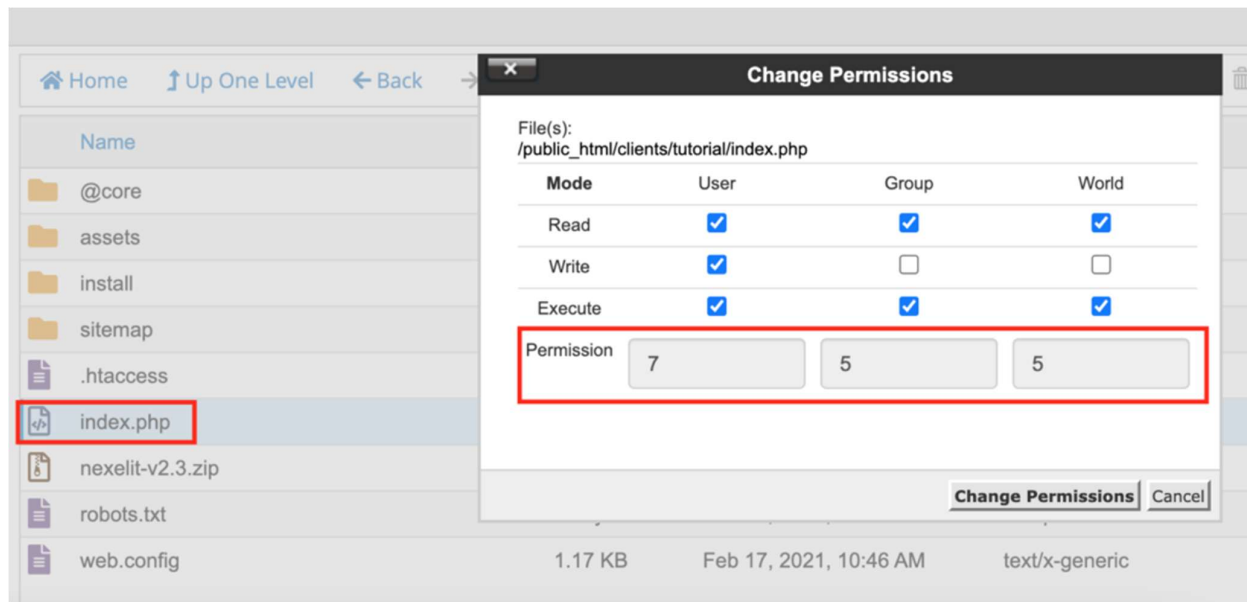

upload installable file upload to server

06. unzip the installable file to server

extract zip file in server

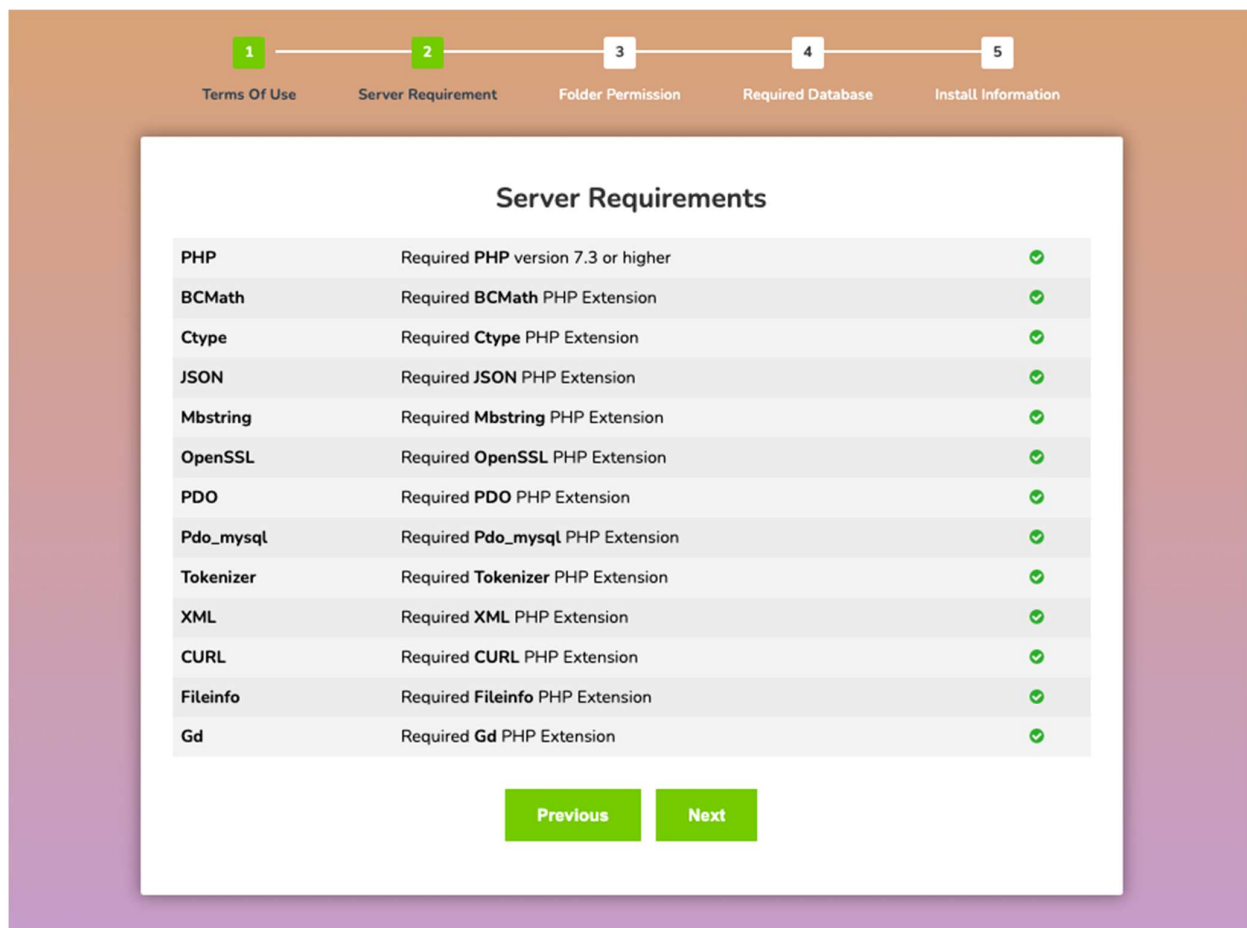

07. Check Permission of **index.php** file, make sure it's file permission to 0755

change permission.

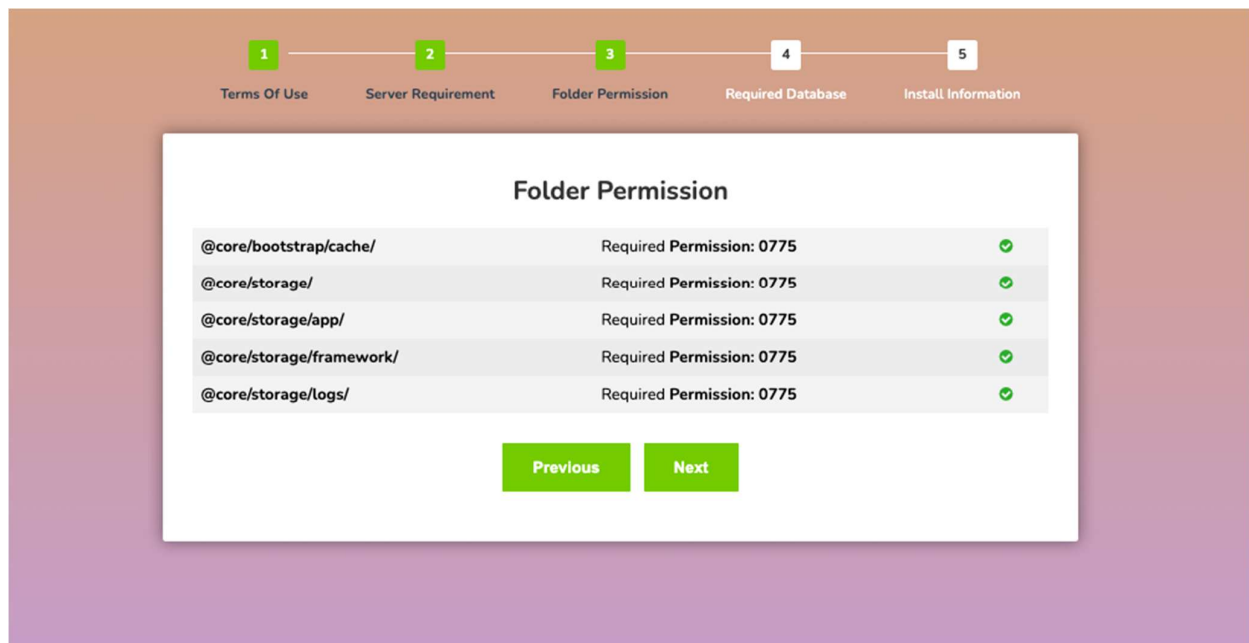

08. Go To the link to install the script www.yoursite.com, you will see install wizard like below picture

09. now click on “i agree, next step” button

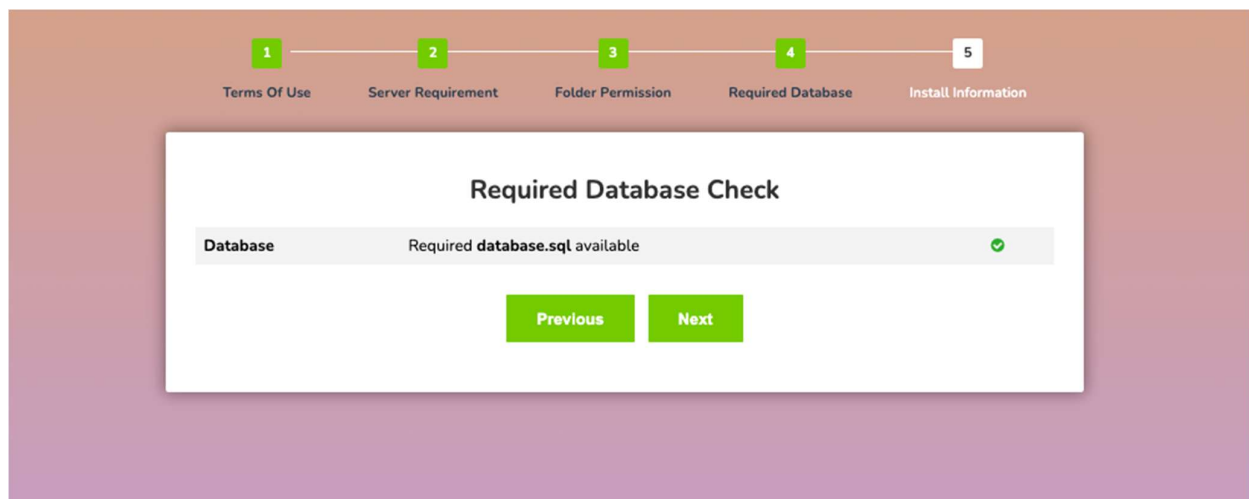

server requirement

make sure you have all the icon green, if you see anything in red color, then you have to install that php extension or have to increase you php version. now click next

folder permission

make sure you have give folder permission to those folder 0755. if you are not familiar with permission you can contact our support or your hosting provider. now click next

database.

this step make sure you have database required for the installation, click next
